

INSTRUCTIONS FOR SETUP & USE ECO-SAFE MODEL SK BOOMBOX

Use rubber gloves when setting up, cleaning, and packing up any toilet system

Remove carrying strap from around unit.

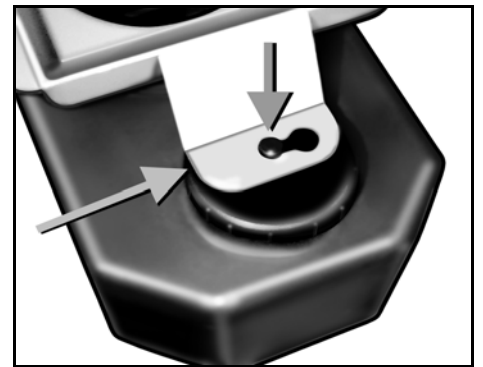

Move seat assembly away from tank, then slip keyhole slot off grooved post on 3" waste cap. Remove chemical spray bottle.

Only before first use unscrew 6" cap and add to EMPTY tank at least 4 oz. of bio-degradable chemical deodorant approved for portable toilets.

This can also be done before starting your trip. These chemicals are available at RV stores and stores that sell portable camp/marine toilets..eg..K-Mart, Wal-Mart, sporting goods, hardware.

Secure seat to Eco-Safe tank by holding seat assembly upright and lock keyhole tab which is on back of seat assembly onto grooved post that is on the 3" waste cap.

Lower seat assembly so that circular flange on bottom side of seat assembly slips into 6" port.

Place Eco-Safe SK BOOMBOX on level, firm surface and you're ready to go.

Note: Because of the low seat height it's more comfortable and efficient to **squat** over the SK BOOMBOX rather than placing all your weight on the seat assembly.

Note: Add enough bio-degradable chemical deodorant and/or liquid throughout your trip so tank contents are maintained in a **semi-sludge** condition. This will make for easy tank dumping.

Note: Clean seat/bowl by spraying and wiping with one of the listed liquids carried in the chemical spray bottle:

1. window cleaner
2. household cleaners
3. water

CLEAN HANDS AFTER EACH USE

**KEEP STOWED TOILET IN UPRIGHT POSTION WHILE BEING TRANSPORTED
TO AVOID POSSIBLE LEAKS AND MESSING OF UNDERSIDES OF CAPS**
